<sup>1</sup> It is interesting to note that in some provinces, per child capita allocations increased while total provincial allocations dropped or were static. As Table 27 shows, the child population, especially in the younger age groups, has dropped in most provinces throughout the 1990s.

<sup>2</sup> Adjusted values based on Consumer Price Index, All-Items, Annual Averages (Index, 1992=100).

<sup>3</sup> In PEI, this figure does not include spending by the Ministry of Education for kindergarten although these are delivered in regulated child care centres.

<sup>4</sup> Subsidies in British Columbia may be used in both regulated and unregulated care. These figures have been estimated using 60% of the subsidy allocation in 1992, 55% in 1995, and 50% in 1998 and 2001.
